

Security of Tenure through the Habitat Agenda, 1976–2016

*Joseph Schechla*¹

Security of tenure is key to the realization of the human rights to adequate housing and to land. The human right to adequate housing is defined in international law, while the legal recognition of the human rights dimensions of land, including also a “human right to land,” remain the subject of much debate and deliberation on the part of standard-setting states. That discourse has made slow but deliberate progress through the Habitat Agenda and accompanying Habitat Debate.

Tenure here is understood to be:

A set of relationships with respect to housing and land, established through statutory or customary law or informal or hybrid arrangements, that enables one to live in one’s home in security, peace and dignity. It is an integral part of the right to adequate housing and a necessary ingredient for the enjoyment of many other civil, cultural, economic, political and social rights. All persons should possess a degree of security of tenure that guarantees legal protection against forced eviction, harassment and other threats.¹

A spectrum/continuum of tenure was recognized in the Habitat II Agenda (1996) among the commitments to respect a variety of tenure arrangements in specific actions by states and all Habitat Agenda Partners. Since then, several standard-setting processes have made these norms (deriving from both law and practice) more precise. That normative development has provided a baseline of lessons and guidance for the treatment of tenure in the New Habitat Agenda (2016).

This paper (1) reflects upon the inventory of tenure-related principles in the Vancouver and Istanbul Declarations and first and second Habitat Agendas, 1976 and 1996, respectively; (2) reviews the emerging norms and specific guidance for states over the past 20 years; and (3) poses recommendations for both the indispensable evaluation of states’ and partners’ implementation of those Habitat II commitments and the priorities for Habitat III.

The Habitat Agenda embodied an integrated vision of the context of human settlements, expressed as “spectrums” or “continuums.” For example, states and other Habitat Agenda Partners have pledged to apply “a regional and cross-sectoral human settlements planning approach that emphasizes rural/urban linkages and treats villages and cities as ends of a human-settlements continuum in a common ecosystem.”² In addition to this integrated spatial expression, the Habitat Agenda enshrines the recognition that human relationships with the land and housing also occupy a similar continuum, forming many nuanced options, ranging in degrees of formality and informality.

The Vancouver Declaration and Plan of Action

In setting new norms for regulating the use of land, the states and governments gathered in June 1976 at Vancouver BC for the first UN Habitat Forum adopted The Vancouver Declaration. It recognized that every state must ensure that both urban and rural population growth are based on a comprehensive

¹ Joseph Schechla is Cairo-based coordinator of the Housing and Land Rights Network (HLRN), a structure of the Habitat International Coalition HIC), the global civic platform dedicated to supporting the Habitat Agenda. In 1991, the same year as the UN Committee on Economic, Social and Cultural Rights adopted the legal definition of the human right to adequate housing, HIC formed its Housing Rights Committee to develop further the human rights methods and norms related to the Habitat Agenda. Within a few years of operation, that same civic initiative would find it necessary to extend the same rights-based tenure-security principles to land as well, resulting in today’s HIC-HLRN (www.hlrn.org).

land-use plan to attain basic goals of social and economic reform “in conformity with its national and land tenure system and legislation” (General Principle 10).

The Declaration does not impose a particular tenure system, nor advocate any tenure model over others. However, the general Declaration guides states to distribute and localize land tenure—as well as population and productive activities—to ensure “orderly processes of urbanization and arrange for rational occupation of rural space” (Guideline for Action 5).

The accompanying Vancouver Action Plan (VAP) recognized in more-detail that the

needs for shelter, infrastructure and services are nearly always greater than the capacity of public authorities to provide them. That is why, throughout the world but especially in the developing countries, people have traditionally provided housing and rudimentary services for themselves and will continue to do so in the future. The establishment of standards and the allocation of resources should reflect this basic fact.³

The VAP’s Section C. “Shelter, infrastructure and services” contains Recommendation C.8 “Construction by the informal sector,” which calls for “ensuring security of land tenure for unplanned settlements, where appropriate, or, if necessary, providing for relocation and resettlement with opportunity for employment” (Priority (i)).

Recommendation C.10 on “Aided Self-help” calls for states to develop programs “for regularizing tenure and for adequately promoting popular subdivisions properly serviced and at prices accessible to low-income people” (important measures (c)(i)).

The preamble to the VAP section on “Land” observes that, to exercise control of land use effectively, “public authorities require detailed knowledge of the current patterns of use and tenure of land” and for legislation that defines the boundaries of individual rights and public interest...”⁴

That early expression of the global Habitat Agenda seems to recognize that landed property assume a social function. In fact, that section explicitly calls for recapturing *plusvalía* (socially produced values) by authorities to have:

suitable instruments for assessing the value of land and transferring to the community, inter alia through taxation, the unearned increment resulting from changes in use, or public investment or decisions, or due to the general growth of the community.⁵

Recommendation D.7 under the same section recognizes the need for information on tenure aspects of land for optimum land-use allocations. This is in recognition of a global reality wherein the need for shelter exceeds the capacity of public authorities to ensure its fulfillment and, hence, make their own tenure and building arrangements. That is why the Vancouver Plan recognizes that, “especially in the developing countries, people have traditionally provided housing and rudimentary services for themselves and will continue to do so in the future.”⁶

The Human Right to Adequate Housing

The Vancouver Declaration and Action Plan did not address dispossession of, or eviction from housing. However, that soon would become the subject of much international jurisprudence and declaratory law development on tenure security through the interpretation of the “human right to adequate housing,” enshrined in the International Covenant on Economic, Social and Cultural Rights (ICESCR). That treaty,

adopted a decade earlier (1966),⁷ involved explicit state obligations to implement that human right already recognized as such in customary law; i.e., the Universal Declaration of Human Rights (1948).⁸

Then, 15 years after the 1st Habitat Agenda, the UN Committee on Economic, Social and Cultural Rights issued its first General Comment on the implementation of a specific human right under the Covenant. That General Comment No. 4 “the right to housing” defined the elements of adequate housing, foremost among them being legal security of tenure. It explains:

Tenure takes a variety of forms, including rental (public and private) accommodation, cooperative housing, lease, owner-occupation, emergency housing and informal settlements, including occupation of land or property. Notwithstanding the type of tenure, all persons should possess a degree of security of tenure [that] guarantees legal protection against forced eviction, harassment and other threats. States parties should consequently take immediate measures aimed at conferring legal security of tenure upon those persons and households currently lacking such protection, in genuine consultation with affected persons and groups;⁹

Istanbul Declaration and Habitat II Agenda

At the time of deliberating the second bi-decennial Habitat Agenda in 1996, the link between the human right to housing and legally protected tenure had become a familiar construct. The recognition of diverse land tenure from Habitat I and subsequent standard-setting processes gave way the incorporation of human rights language in Habitat II, but not without a struggle. Legend now is the stubborn resistance on the part of some states, notably the USA, to the very existence of a human right to adequate housing and its constituent elements. Nonetheless, through the negotiation efforts of Habitat International Coalition Members with the ultimate support of many states, the second PrepCom consolidated (1) the affirmation of the centrality of human rights, in particular the human right to adequate housing, in human settlements and (2) the recognition of the principles of good governance in balanced rural and urban development. Those two pillars of the Habitat II Agenda are reflected in the Istanbul Declaration and Habitat II Agenda.

Human rights obligations lie at the core of the Istanbul Declaration:

8. We reaffirm our commitment to the full and progressive realization of the right to adequate housing as provided for in international instruments. To that end, we shall seek the active participation of our public, private and non-governmental partners at all levels to ensure legal security of tenure, protection from discrimination and equal access to affordable, adequate housing for all persons and their families.

The operational section of the Habitat II outcome documents, the Global Plan of Action, recognizes that the most serious problems confronting cities, towns, rural areas and their inhabitants, including insecure land tenure.¹⁰

Reaffirming states’ “commitment to the full and progressive realization of the right to adequate housing, as provided for in international instruments,” the Habitat Agenda pledges that everyone “will enjoy freedom from discrimination in housing and legal security of tenure.”¹¹ More specifically, it enshrines the commitment to provide “legal security of tenure and equal access to land to all people, including women and those living in poverty; and undertaking legislative and administrative reforms to give women full and equal access to economic resources, including the right to inheritance and to ownership of land and other property...”¹²

Reflecting the legal definition of “adequate housing” already established in General Comment No. 4, five years before Habitat II, that new Agenda acknowledged that adequate shelter means more than a roof over one’s head; “It also means,” among other essential tangible and intangible attributes, “security of tenure.”¹³ Committed *actions* included protection of the right to adequate housing for people living in a variety of tenure arrangements and, in particular, “providing legal security of tenure and equal access to land for all, including women and those living in poverty, as well as effective protection from forced evictions that are contrary to the law, taking human rights into consideration and bearing in mind that homeless people should not be penalized for their status.”¹⁴ That commitment to uphold housing rights, regardless of tenure status, was to involve giving “special attention...to all those, including women, who are at considerable risk because they lack security of tenure or are inhibited from participation in shelter markets.”¹⁵

In Habitat II, we witness the emerging awareness and articulation of a “continuum of land rights” and tenure arrangements: “through ownership, rental and other tenure options, responding to the diversity of needs”¹⁶ and encompassing “the diversity of tenure systems.”¹⁷ Where inhabitants’ precarious tenure status leaves them vulnerable to numerous hazards and human rights violations, Habitat II also embodied the recognition of the equal importance of land tenure as a factor of adequate housing. States acknowledged that “ensuring access to land and legal security of tenure are strategic prerequisites for the provision of adequate shelter for all...” in “the development of sustainable human settlements affecting both urban and rural areas...” and as a way of “breaking the vicious circle of poverty.”¹⁸

While recognizing the existence of different national laws and/or systems of land tenure, The Habitat II Agenda emphasized also that all spheres of government,¹⁹ nevertheless, should strive to remove all possible obstacles that may hamper equitable access to land and ensure that equal rights of women and men related to land and property are protected under the law.”²⁰ The 1996 Agenda asserts that the failure to adopt appropriate rural and urban land policies and land-management practices remains a primary cause of inequity and poverty.²¹

The called-for tenure-securing commitments of states and respective governments included actions to:

- Adopt an enabling legal and regulatory framework, understanding and acceptance of existing practices based on an enhanced knowledge, understanding and acceptance of existing practices and land-delivery mechanisms²²;
- Provide institutional support, accountability and transparency of land management, and accurate information on land ownership, land transactions and current and planned land use²³;
- Explore innovative arrangements to enhance the security of tenure, other than full legalization, which may be too costly and time-consuming in certain situations, including access to credit, as appropriate, in the absence of a conventional title to land²⁴;
- Promote measures to ensure that women have equal access to credit for buying, leasing or renting land, and equal protection for the legal security of tenure of such land²⁵;
- Remove legal obstacles, including those related to security of tenure and credit, that deny women equal access to basic services²⁶;
- Take full advantage of the potential contribution of key interested parties in the private formal and informal sectors, and support the engagement of nongovernmental organizations, community organizations and the private sector in participatory and collective initiatives and mechanisms appropriate to conflict resolution²⁷;

- Encourage the participation of community and nongovernmental organizations to reduce their vulnerability cause by insecure tenure²⁸; and
- Carry out tenure regularization, as appropriate, in informal settlements to achieve the minimum level of legal recognition required for the provision of basic services.²⁹

Five years after the adoption of Habitat II, the General Assembly held its Special Session on Implementation of the outcome of the UN Conference on Human Settlements (Habitat II) at UN Headquarters. There, states reaffirmed their Habitat II commitments, but recognized gaps and obstacles in implementation. First noted among them was that “the majority of people living in poverty still lack legal security of tenure for their dwellings, while others even lack basic shelter.”³⁰

In 2001, the same year as that Istanbul+5 review, the UN Secretary-General Kofi Annan issued a roadmap for implementing the General Assembly’s Millennium Declaration of 2000. That culmination of several ensuing efforts resulted in the Millennium Development Goals (MDGs).³¹ Goal 7: Ensure environmental sustainability contained a target to have achieved “a significant improvement in the lives of at least 100 million slum dwellers by 2020.”

The generally accepted definition of slum includes insecure tenure among its five criteria,³² so we could assume that “slum” life improvement serves as a proxy indicator for the improvement of tenure security under the MDGs. The current 2030 Agenda for Sustainable Development, however, are silent on the subject. 2030 target 11.1 does set out to “ensure access for all to adequate, safe and affordable housing and basic services and upgrade slums.” That language creates a gaping need for specificity that further indicator development and/or Habitat III targets and indicators should fill.

Only in the rural context do the 2030 Goals address security of habitat-resource tenure. Goal 2. “End hunger, achieve food security and improved nutrition and promote sustainable agriculture” has a target promoting security of land tenure:

2.3 By 2030, double the agricultural productivity and incomes of small-scale food producers, in particular women, indigenous peoples, family farmers, pastoralists and fishers, including through secure and equal access to land, other productive resources and inputs, knowledge, financial services, markets and opportunities for value addition and non-farm employment.

Meanwhile, the Global Land Tool Network (GLTN) of partners has adopted the “Continuum of Land Rights” approach as a useful tool and method of envisioning and providing security of tenure for all, at scale. The Continuum of Land Rights (CoLR) is a metaphor, not an ideologically bound theory. It is the recognition of a time-honored reality. It is “an aid to describing and explaining an existing tenure situation and predicting how a range of tenure types may transform over time, given different scenarios and intervention strategies.”³³

The CoLR approach is described, rather, as a system of thought in which diverse practices of land access and use patterns coexist. The recognition of this plurality allows the prevalence of a diversity of tenure situations, ranging from the most informal types of possession and use, to full ownership. The continuum, which was adopted at the 2011 UN-Habitat Governing Council resolution by Member States, is now widely accepted by the development community and UN member states.³⁴

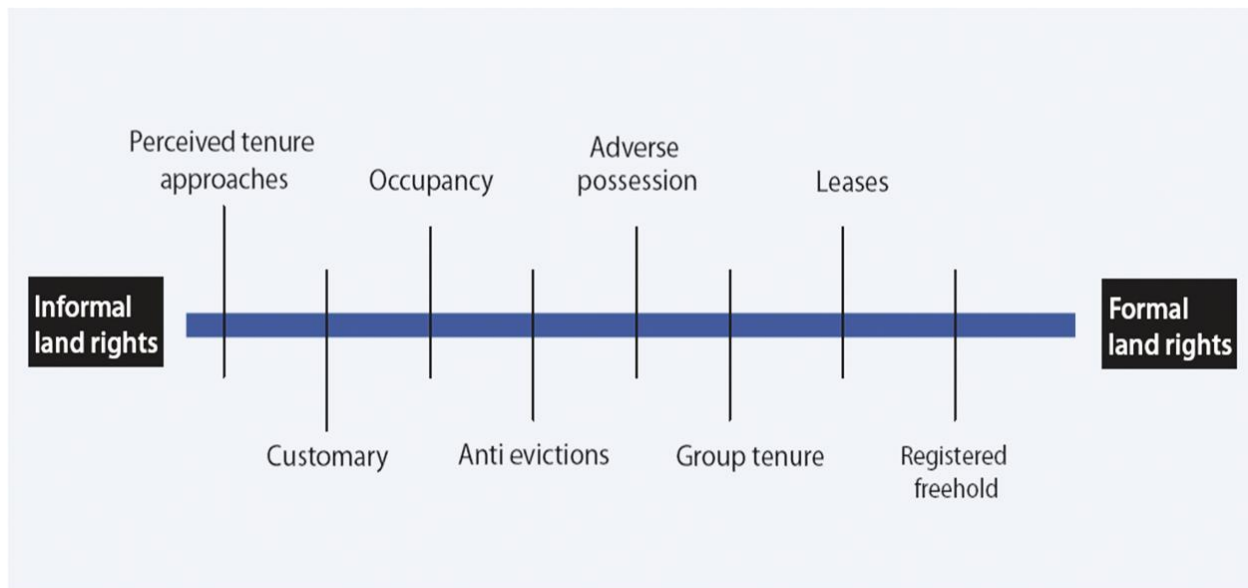

Figure 1: GLTN depiction of the land rights continuum, after removing the GLTN's arrow at the right-end pole of the straight line.

The land-rights continuum concept recognizes that:

- Tenure can assume a variety of forms;
- The various rights do not actually lie on a single line, but may overlap with one another;
- Rights at the most-formal end of the continuum should not be seen as the preferred or ultimate form of land rights;
- The points on the continuum are each one of several appropriate and legitimate forms that may coincide; the most appropriate form depends on the particular time and context.³⁵

The linear graphic and the concept recognitions above may pose some contradictions. The recognition that the various rights do not lie on a straight line would suggest a form other than a straight line to represent any position, process or movement along the spectrum. The linear representation also does not convey the potential combinations or hybrid cases. The suggested “progress” along the line, from left to right (in European languages) implies movement toward a culmination point or, at least, a process toward formality.

Given the hazards arising from that graphic, HIC-HLRN has developed an alternative conception. In order to convey the sense of a true continuum and the potential movement along it, we propose a Möbius strip. Facing the further dilemma of representing tenure types not yet depicted on the linear pattern, we found that the tenure status of public land and property, or public-purpose land and property, lie outside the course of other land and property claimed by people. Akin to the common use and benefit of land and property, the further recognition of its social function as a feature of *all* forms of land and property at all times. Therefore, the resulting graphic depicts that constant as penetrating all other

types and points on the continuum. In that case, both the commons/public-purpose and the social function of land and property form aspects that are consistent with, and, hence, axes running through land and property belonging or potentially subject to each status and point along the continuum.

Figure 2: Alternative conception of the land rights continuum based upon a Möbius strip allowing for nonpolar movement on a plane containing numerous points (types of tenure).

Good examples of implementing this differentiated expression and understanding of land and property tenure in law are found in the Namibian Flexible Land Tenure Act (Act. No. 4 of 2012)³⁶ and Mauritania's Pastoral Code (2000).³⁷ Notorious failures at recognizing the continuum of legitimate tenure are found in the law and practices of the Republic of Sudan, the State of Israel and its parastatal institutions, and the copy-cat Islamic State in the Levant (ISIL).

Other examples may involve more dynamic processes, such as the integral land reforms of the Arab Republic of Egypt under the presidency of Gamal Abd ul-Nasr. The scope of Egypt's land reforms in 1950s eventually gave way, however, to a foreclosing of tenure protections as the biases and land interests of the judiciary, legislature and successive presidents eroded and/or left vulnerable a range of housing and land tenure claims.

While urban land reform recognizing a continuum of tenure is rare, another standard-setting effort in the late period of Habitat II implementation is especially important. The UN Human Rights Council's Special Rapporteur on adequate housing Raquel Rolnik³⁸ ended her mandate by proffering a set of guidelines developed through multiple expert group consultations. The resulting "guiding principles on security of tenure for the urban poor," with "commentary," were to assist states and other relevant actors in addressing the current tenure insecurity crisis faced by the urban poor in an increasingly urbanized world consistent with international human rights law.

The Special Rapporteur asserted that the concept of legitimate tenure rights extend beyond mainstream notions of private ownership and include multiple tenure forms deriving from a variety of tenure systems. States should promote, protect and strengthen a variety of tenure forms, including those

deriving from statutory, customary, religious and hybrid tenure systems. Consistent with standing obligations of states, she urged that “All relevant laws, policies and programs should be developed on the basis of human rights impact assessments[that] identify and prioritize the tenure arrangements of the most vulnerable and marginalized,” promoting, strengthening and protecting, as appropriate, in the given context:

- (a) Possession rights;
- (b) Use rights;
- (c) Rental;
- (d) Freehold tenure; and
- (e) Collective arrangements.³⁹

The SR’s guiding principles urge harmonization of the range (continuum) of tenure within a state’s integrated system of law, institutions, policies and practices. They incorporate also the foregoing principles of:

- Prioritizing *in situ* solutions,
- Promoting the social function of property,
- Combating discrimination on the basis of tenure,
- Promoting women’s security of tenure,
- Respecting security of tenure in business activities,
- Strengthening security of tenure in development cooperation,
- Empowering the urban poor and holding states accountable,
- Ensuring access to justice.⁴⁰

In 2014, the Human Rights Council acknowledged with appreciation, in particular, the Guiding Principles on Security of Tenure for the Urban Poor, and encouraged states to take these guidelines into account when planning and implementing measures to improve the security of tenure for the urban poor.⁴¹

Conclusions for Habitat III

This evolution of normative development and standard setting reflects a gradual progression. In light of the standing commitments of Habitat II as a minimum basis for negotiating the New Habitat Agenda (2016) and these developments, the priority principles for elaborating the new Agenda come into view.

Capturing and enshrining these and other related human rights and development principles established as norms over the decades of the Habitat Agenda, the priorities for Habitat III commitments on secure tenure must include, *ad minimum*:

- Common-but-differentiated responsibilities to ensure security of tenure⁴²;
- Self-determination of nations and peoples⁴³;
- Nondiscrimination on the basis of tenure⁴⁴;
- “Leave no one behind”⁴⁵ without secure tenure;
- Guarantees for women’s security of tenure⁴⁶;
- Reach the further behind first,⁴⁷ prioritizing *in situ* tenure solutions;
- Fill security-of-tenure gap in the 2030 Development Agenda;
- Progressive realization / no retrogression⁴⁸;
- Ensuring dedication of the maximum of available resources⁴⁹;

- Three pillars of sustainable development: the economic, social and environmental, girded with human rights implementation (respect, protection and fulfillment)⁵⁰;
- Coherence among humanitarian, development and (preventive and remedial) human rights methods and approaches to protect tenure⁵¹;
- Extraterritorial obligations to respect, protect and, when possible, fulfill security of tenure in trade, investment, development assistance and international cooperation, in general⁵²;
- Reaffirmation of the continuum of tenure rights⁵³;
- Recognition of the social function of land, housing and property⁵⁴;
- Respect for security of tenure in socially responsible business activities⁵⁵;
- Prohibition, criminalization and prosecution of “forced evictions”⁵⁶;
- State accountability for respecting, protecting and fulfilling the human rights of urban and rural poor;
- Implementation, accountability, rule of law,⁵⁷ access to justice⁵⁸ and remedy (reparations)⁵⁹ domestically and internationally;
- Built-in Habitat III implementation monitoring, evaluation and accountability of states and UN agencies.⁶⁰

Applying these already standing international commitments of states, such guiding principles help to specify the corresponding actions needed in all spheres of government, as well as at regional and international levels. The following constitutes a partial list:

- (a) Conduct city/region-wide and country-wide assessments of tenure arrangements;
- (b) Identify and resolve tenure issues for insecure settlements and population groups, including the homeless;
- (c) Develop city/region-wide strategies for securing tenure and upgrading settlements on different categories of land and with various present tenure arrangements;
- (d) Review and reform urban/region plans and regulations, with a view to integrating settlements;
- (e) Recognize and protect agroecological activities and tenure holders in urban territories within city/region food systems and ecosystems;⁶¹
- (f) Adopt and implement a human rights-compliant resettlement policy to be applied where in situ solutions are not possible;
- (g) Facilitate participatory settlement mapping, enumerations and tenure registration;
- (h) Establish fair and effective land dispute resolution mechanisms;
- (i) Free, prior and informed consent (FPIC) with respect for communities’ local and traditional knowledge in establishing secure tenure and changes to community tenure arrangements;
- (j) Allocate sufficient funds to ministries, municipalities and local governments for the implementation of these measures; and
- (k) Adopt or revise legislation to recognize and protect multiple tenure arrangements;⁶²
- (l) Protect traditional and adverse-possession arrangements with legal SoT guarantees, including with judicable instruments, as measures to ensure inhabitants resilience with secure tenure in case of displacement and resettlement;
- (m) Conduct pre-emptive and participatory social, environmental and human rights impact assessments in cases of policies, programs, projects and related practices involving changes in tenure arrangements for affected communities, with the purpose of ensuring remedy and reparations to ensure equal or better living conditions as a result;
- (n) Ensure “transparent, comprehensive and accessible systems [including information systems] in transferring land rights and legal security of tenure.”⁶³

This review of the development of norms through law and practice over the 40 years of the Habitat Agenda processes and putative implementation would not be complete without reference to the Legal Empowerment of the Poor and its UN-level Commission (CLEP). While this worldwide and generously funded effort also sought solutions for urban and rural poor living with insecure tenure, it promoted only one expression of tenure on the actual continuum. Its exclusive promotion of private ownership (freehold tenure) lost its luster through the lessons of the subprime mortgage and financial crises of the late 2000s and has not delivered the intended mass capitalization of newly titled homes. However, these lessons are valuable toward rethinking the spectrum of solutions for the foregoing examples and other tenure-specific aspects required of the New Habitat Agenda (2017–36).

Other interpretations of states' treaty obligations in cases involving security of tenure have evolved through the UN Human Rights System to recognize the gamut of tenure arrangements and the corresponding human rights. Notable among them are the Principles on Housing and Property Restitution for Refugees and Displaced Persons (Pinheiro Principles),⁶⁴ the Basic Principles and Guidelines on Development-based Eviction and Displacement (2007),⁶⁵ the draft Declaration on the Rights of Peasants and other People Working in Rural Areas (2012),⁶⁶ The Voluntary Guidelines on the Responsible Governance of Tenure of Land, Fisheries and Forests (2012)⁶⁷ and the Framework for Action for Food Security and Nutrition in protracted Crises.⁶⁸ All are essential reading and subjects to instruct and incorporate into the New Habitat Agenda as Habitat III operational principles to ground the commitments for advancing the security of tenure.

Unlike permanent obligations under treaty law, as in the case of the human rights Covenants and Conventions, the risk in revisiting temporal commitments as those enshrined in the Habitat II Agenda is that changing political and ideological trends could erode those commitments to produce a lower standard in the next iteration. The Habitat II Agenda faces that real prospect in the process leading up to Habitat III, not least by UN-Habitat's dismantling of it in favor of a narrower "new *urban agenda*." However, for those contributing to and negotiating the multilateral, cross-sectoral and multistakeholder instrument of Habitat III, these well-established principles and corresponding commitments should form a firm baseline to ensure no backtracking, but rather more-effective approaches to eliminate disparities by addressing root causes, in particular, in the crucial subject of security of tenure.
